# We are in search of a
# Full Stack Developer

Phonism is the world's leading automation platform to deploy, manage, secure, and migrate SIP devices at scale. Phonism delivers a universal way to manage the complexities of multi-vendor device management with a powerful SaaS platform for anyone selling or supporting cloud communications solutions. We are currently searching for an accomplished and experienced Full Stack Developer.

## Responsibilities

▶ Design and develop code that extends the platform

▶ Provide input product management regarding optimal methods, engineering strategies to solve complex problems efficiently

▶ Create, implement database schemas to support your solutions

▶ Interface with existing developers to help support issues, bugs

▶ Learn about VoIP technologies and devices

▶ Own your code, and be open to constructive feedback

▶ Peer code reviews before merging into mainline

## Skills & Experience

▶ 2+ years of React

▶ 2+ years of Javascript/JQuery

▶ Proficient working within *nix operating systems (e.g. Linux, macOS)

▶ Experience designing and working with REST APIs

▶ Preferably 2+ years of experience working with MVC frameworks

▶ Preferably 1+ years of PHP experience

▶ Strong problem solving abilities

▶ Experience Git for version control

▶ Experience MVC frameworks

▶ Experience in multi-person development teams

▶ Excellent written communication skills

## Desirables

+ Enterprise software experience

+ Networking and or VoIP experience

+ Active in the open source community
